DETAILED ACTION

Response to Amendment

1. In the amendment filed on 8/26/2010, claims 7 has been amended. The currently pending claims considered below are Claims 7-11.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

The prior arts of record, Whiting (US Publication 2002/0107877) and Bamford et al. (US Patent 5,449,367) teach analogous art to the instant application, that of providing database back up on multiple nodes for data recovery. Whiting more specifically teaches backing up files from multiple nodes of a computer network to a centralized backup storage means by tracking and managing differences between a current file and previous backup versions of a file. Bamford more specifically teaches providing a database recovery system wherein logs are distributed on a per client basis with the changes to data stored in the logs. However, after careful consideration of the Response (pages 1-5) filed on 8/26/2010, the applicant extensively and specifically pointed out how the claims overcome the prior art of record, particularly the prior art of Whiting that teaches a backup directory file containing data about backup data files stored in a node containing shared database data to rewrite backup database, but does not specifically disclose accessing a local redo logs in the local storage of each node to perform a complete rewrite of database data files, control files and an archived redo log in the shared parallel server database based on individual redo logs of each node. The prior art of Whiting in

view of Bamford does not specifically teach utilizing redo logs stored in each node to completely rewrite a shared parallel server database with change information for a backup process, as disclosed in independent claim 7. Thus, in the instant application, a plurality of nodes sharing a parallel server database can initiate a complete rewrite of the shared parallel server database by utilizing redo logs stored in each node.

The feature of utilizing redo logs stored in local storage of each node to completely rewrite a shared parallel server database is indicated in independent claim 7, wherein the claim teaches "accessing by said selected node(s) each of said local redo logs in local storage on each of said plurality of nodes; accessing by said selected node(s) data in said shared parallel server database; and completely rewriting database data files, control files and archived redo log in said shared parallel server database to said selected node(s) by said selected node(s) accessing data in said shared parallel server database and also in said local redo logs to provide data to completely rewrite said shared parallel server database". Consequently, independent claim 7 and dependent claims 8-11 are allowable over prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
